

STOKER

Multi Fuel Insert Convection and Radiant Stove

The unique design of the Mulberry **STOKER** can deliver 6.5kW of heat *throughout* the room because a convection stream distributes heat much more widely than radiant heat alone can achieve. It's a stove Dracula himself would have appreciated as everyone in the house will have warm blood! Taking up a very small place on the hearth with minimal intrusion into the room, the **STOKER** is ideal for the modern home.

FEATURES

- Fits into standard fireplace without removing fireback
- Improves your house Energy Rating (BER)
